

PERMACONN

GPRS PM1025 OUTSTATION

PERMACONN GPRS PM1025 OUTSTATION

The Permaconn solution is the preferred choice among today's Security engineers for enhanced security and modern telecommunication demands.

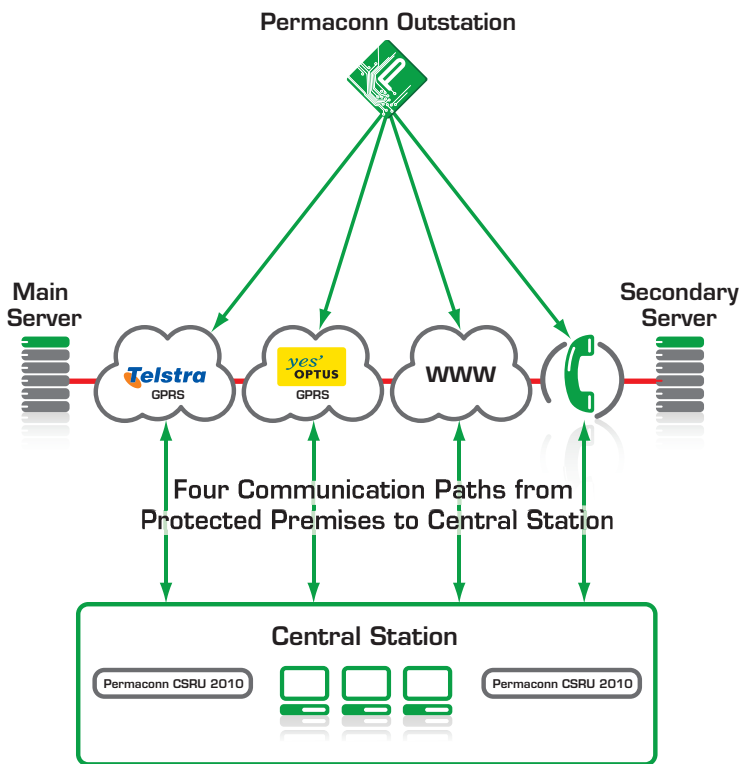

All alarm messages have four (4) totally independent paths of communication available - Telco 1 GPRS, Telco 2 GPRS, IP and Phone Line.

With four (4) paths of communication and every signal being acknowledged as 'sent & received', you can be guaranteed the right choice has been made.

Permaconn has been independently tested by a certified test laboratory and is compliant to Class 4 AS/NZ 2201.5-2008.

The choice is simple. The choice is Permaconn.

PERMACONN GPRS DEDICATED NETWORK

PERMACONN GPRS PM1025 OUTSTATION KEY FEATURES

- Dialler capture module (DI-200) is available to interface onto any alarm panel using the Contact ID (CID) reporting format.

PERMACONN™
leaders in GPRS security technology

DON'T BE CUT OFF.

PERMANENT WIRELESS CONNECTION.

PERMACONN GPRS PM1025

HOW DO YOU PROTECT YOUR HOME AND BUSINESS?

It's widely known that thieves cut telephone lines in order to disable alarm systems. So what's the solution? Permaconn can supply you with an affordable alarm communication system that utilises GPRS to link you to our Central Monitoring station. That means no more telephone lines. And, this is not just any ordinary radio but PERMACONN, a product of Radio Data Comms, Industry Leaders in Security Technology.

THE SIMPLE FACTS

Your current alarm system is only as good as your telephone line and this makes you very vulnerable. In an emergency your message must get through and the only way to ensure this happens is with Permaconn's wireless connection. This ensures that your alarm message is received by the Central Monitoring station without the need for phone lines.

YOU'LL SAVE MORE THAN YOUR PROPERTY

Alarm panels may make a phone call every time the panel is armed / disarmed / tested or when an alarm message is sent back to the Central Monitoring station. When a Permaconn signalling device is attached all messages are sent using the GPRS network, saving daily telephone costs.

BENEFITS

- Future-proof solution when VoIP / Naked DSL services are installed.
- No phone lines to cut.
- Permanent on-line connection.
- More than ten (10) data plans to choose from.
- Compatible with most existing alarm systems.
- Recognised by major insurance companies.
- Fixed monthly costs – no surprise phone bills.
- GPRS coverage from Telstra and Optus.

AUSTRALIAN STANDARDS

The Permaconn system has been certified and meets class 2, 3 and 4 of AS/NZ2201.5-2008. Insurance companies recognise the benefits of installing Permaconn and may offer genuine discounts.
